

A new section, 5189.1 *Process Safety Management for Petroleum Refineries* [1], was added to the Cal/OSHA regulation that specifically targets petroleum refineries. The latest version of the change to the Cal/OSHA regulation was published in July 2016 and effective October 1, 2017. The regulation includes revision of existing PSM elements and addition of new PSM elements and topics such as Safeguard Protection Analysis (SPA). This webinar focuses on requirements for an SPA, what a SPA is, and how an SPA it is conducted.
