Temperature Measurements Hands – On Course

The Temperature Measurements Hands - On course offers attendees an opportunity to use a laboratory grade programmable temperature calibrator while calibrating a 25 F -125 F pocket thermometer. The course covers the basic theory of temperature including sensors types with practical examples. Course length: Approximately 75 minutes.

Agenda

- Temperature defined
- Units of temperature
- Temperature sensors explained
- Thermocouples
- RTD's
- Thermistors
- Hands – On
- Questions

The instructors Jim Pronge of Ametek – Crystal Engineering has been involved with pressure and temperature measurement applications around the globe. Doug Larson is well versed in pressure and temperature measurements having worked the bench in a calibration laboratory and now current President of the Wilmington Instrument Company.
